PRODUCTS

A vertical collage of various dried fruit products. From top to bottom, it shows: dark raisins, light-colored pineapple slices, bright orange mango slices, and green kiwi slices. The products are arranged in a slightly overlapping, artistic manner.

History of dried fruits

Fruit drying has a long history in countries such as Iran, Syria, Egypt, Iraq and Turkey. The history of dried fruit production dates back to 1700 BC. At that time, the peoples of the Mediterranean and the Middle East dried their summer fruits and fed them for the winter, because dried fruits greatly preserve the nutritional value of fresh fruits.

The content of different nutrients in different dried fruits indicates the need for different types of dried fruits in the diet. Traditional dried fruits such as figs, dates, apricots and apples are part of the Mediterranean diet and their consumption dates back to previous centuries.

Looking at the history of dried fruits, we find that in the past, the nutritional value of dried fruits was well known to people in the community, as today, the consumption of dried fruits is very common among people.

Since it is not always possible to store fresh fruit, man has always been looking for a way to store fruit longer. Today, freezing is considered to be the best way to store food at home; However, many fruits, if frozen, have an unsightly appearance and are therefore generally not used frozen, and the best way to preserve the fruit is dried.

Properties of dried fruits

Dried fruit, if processed completely naturally and without additives such as sugar, can be a good and healthy snack to relieve hunger and it can be stored for a long time, and therefore it is a good substitute for fresh fruit in different situations.

Fruits are a group of foods that have all the nutritional value and are rich in vitamins, fiber and antioxidants that are necessary to maintain vitality, strengthen the body and protect against any disease, especially cancer. But examine them carefully, requires a lot of information that cannot be addressed here, but those who are interested can study it and feel the importance of these foods.

Dried fruit production technology
